JAVA / J2EE DEVELOPER

Shubham Utturkar

Mobile Number :- **8806906970**

Email :- **utturkarshubham@gmail.com**

Address :- **Pune.**

JAVA / J2EE SKILLS:

- Technically advance java developer with experience in designing and developing **Java / J2ee web based application.**
- Experience with Object Oriented programming such as core java SE including **collections**, **threads**, **multithreading** and **JDBC** concepts.
- Offering strong expertise in **Spring boot, web service** and **microservices, implementing Hibernate framework (ORM)** to interact with database.
- Experience in developing the user interface screens for clients using **JSP, JSTL, HTML**. Experiencein developing database queries using **MYSQL workbench**.
- Experience in developing **REST Web Services** based in business Requirements in spring boot.
- Experience in **creating new Controller, Entity, Repository and Service layers using spring boot.**
- Trouble shooting analysing and fixing defects.
- Integrating required **API's** in the application. v
- Experience in developing application using **MVC architecture**.
- Testing web services using **POSTMAN**.
- Configuring **email sending services**.
- Excellent knowledge of creating **Servlets**.
- **Spring Security, Spring Validation, JWT Token, Thymeleaf**.

EXPERIENCE (2.3 YEARS)

- Total Experience : **2.3 years**
- Company Name: **RIA Advisory, Pune.**
- Designation : **Java Developer**

EDUCATION

- Completed Bachelor's of Engineering from Sinhgad Institute Of Technology, Lonavala.

PROJECT WORK

- Project Name: RetailBlaze13.7
- Duration: 1.9 years
- Technology & Tool Used: **Core Java, Spring Boot, Hibernate JPA, Web services,**
- **PostMan, MySql Work Bench, etc**
- Process: Agile Scrum Process
- Architecture Type: MVC

PROJECT DESCRIPTION

Customer relationship management (CRM) is the combination of practices, strategies and technologies that companies use to manage and analyze customer interactions and data throughout the customer lifecycle. The goal is to improve customer service relationships and assist in customer relation and drive sales growth. CRM systems compile customer data across different channels, or points of contact, between the customer and the company, which could include the company's website, telephone, live chat, direct mail, marketing materials and social networks. CRM systems can also give customer-facing staff members detailed information on customers' personal information, purchase history, buying preferences and concerns.

- Creating database schema using MYSQL workbench Developing view layer for the assigned modules using jsp and jstl tags
- Developing controllers to interact with view and backend business logic using spring boot
- Developing Entity classes based on the database schema's
- Maintain the repository layer for all database operations in spring boot implementing web service using restful API
- Spring Security, Spring Validations, JWT token.
- Testing web services using POSTMAN
- Implementing microservices by dividing project in modules
- Exposing web services as well as consuming web services
- Integrating email sending services
- Configuring application. properties file
- Fixing defects communicated by the testers

PROJECT WORK

- Project Name: Raymond James Phase 3.0
- Duration: 5 months
- Technology & Tool Used: **Core Java, Spring Boot, Hibernate JPA, Web services,**
- **PostMan, MySql Work Bench, etc.**
- Process: Agile Scrum Process
- Architecture Type: MVC

PROJECT DESCRIPTION

The FRS 2.4 is a software application that enables users to book and manage their flights online. The system provides a user-friendly interface for customers to search for available flights, book seats, add passengers, update passenger data, make reservations, and many more operations.

ROLES AND RESPONSIBILITIES

- As a Java developer, I have expertise in designing and developing RESTful API endpoints using the Spring Boot framework. I have created controllers, services, repositories, and many more layers to develop scalable and maintainable code that adheres to software development best practices and guideline
- I have implemented authentication and authorization mechanisms using Spring Security to secure API endpoints, ensuring that they are protected against unauthorized access. I have also worked with JWT tokens to provide secure communication between clients and servers.
- Also, designed and implemented an Email API that enabled automated and personalized communication with customers, increasing engagement and retention rates. Developed and tested email templates and workflows to ensure successful delivery and tracking of emails.
- Overall, my experience in developing scalable and maintainable code, handling exceptions and errors, designing and implementing validation, developing REST controllers, testing API functionality, creating MySQL database schemas, and integrating Hibernate JPA with the Repository layer makes me a valuable asset to any software development team.

PERSONAL INFORMATION

Date of Birth : 17/08/1997

Marital Status : Single

Nationality : Indian

Languages : English, Hindi, Marathi

DECLARATION

I hereby declare that the above mentioned information is true.
